

Multi-Occupancy Buildings

All of your fluid management solutions, under one roof

Sourcing your fluid management products can be complex, time-consuming and expensive. That's why here at Aliaxis, we're proud to be the heart and lungs of the building, providing a wide range of interconnecting fluid management solutions for a variety of applications, including soil & waste, rainwater management, hot and cold and boosted chilled water.

We're here to support you from the ground up. Our extensive experience in our technical services allows us to guide you through the design process, specification through value engineering and assist with any technical installation requirements.

Along with site support and product training, we can help you find the peace of mind that is essential throughout the development of your multi-occupancy project.

#wearealiaxis

We keep life flowing by ensuring the safe and continuous movement of water, gas, and energy across infrastructure networks, building services and industrial processes.

From specification and advice on predefined schemes through to fabrication design and training, we tackle the most

complex fluid management challenges with the curiosity to think differently and the courage to challenge the status quo.

It's this fluid thinking that we use to collaborate with experts across the whole value chain, to deliver true peace of mind to our partners.

HTA cPVC- Hot and Cold

Our fully integrated system of HTA pipes, fittings and valves designed for transporting hot and cold water at pressure.

- Smooth bore reduces biofilm and improves pump efficiencies
- Lightweight and easy to install

Fluxo® PEX-AL-PEX - Multi Layer Solution

Fluxo® is a complete system of flexible, easy-to-fit pipes non-corrodible crimp fittings for the supply of hot, cold and chilled water at pressure.

- Features leak detection technology to guarantee a sealed joint
- Smooth bore and large internal diameter improving flow rate and reducing bacteria growth

Superflo ABS - Chilled Water

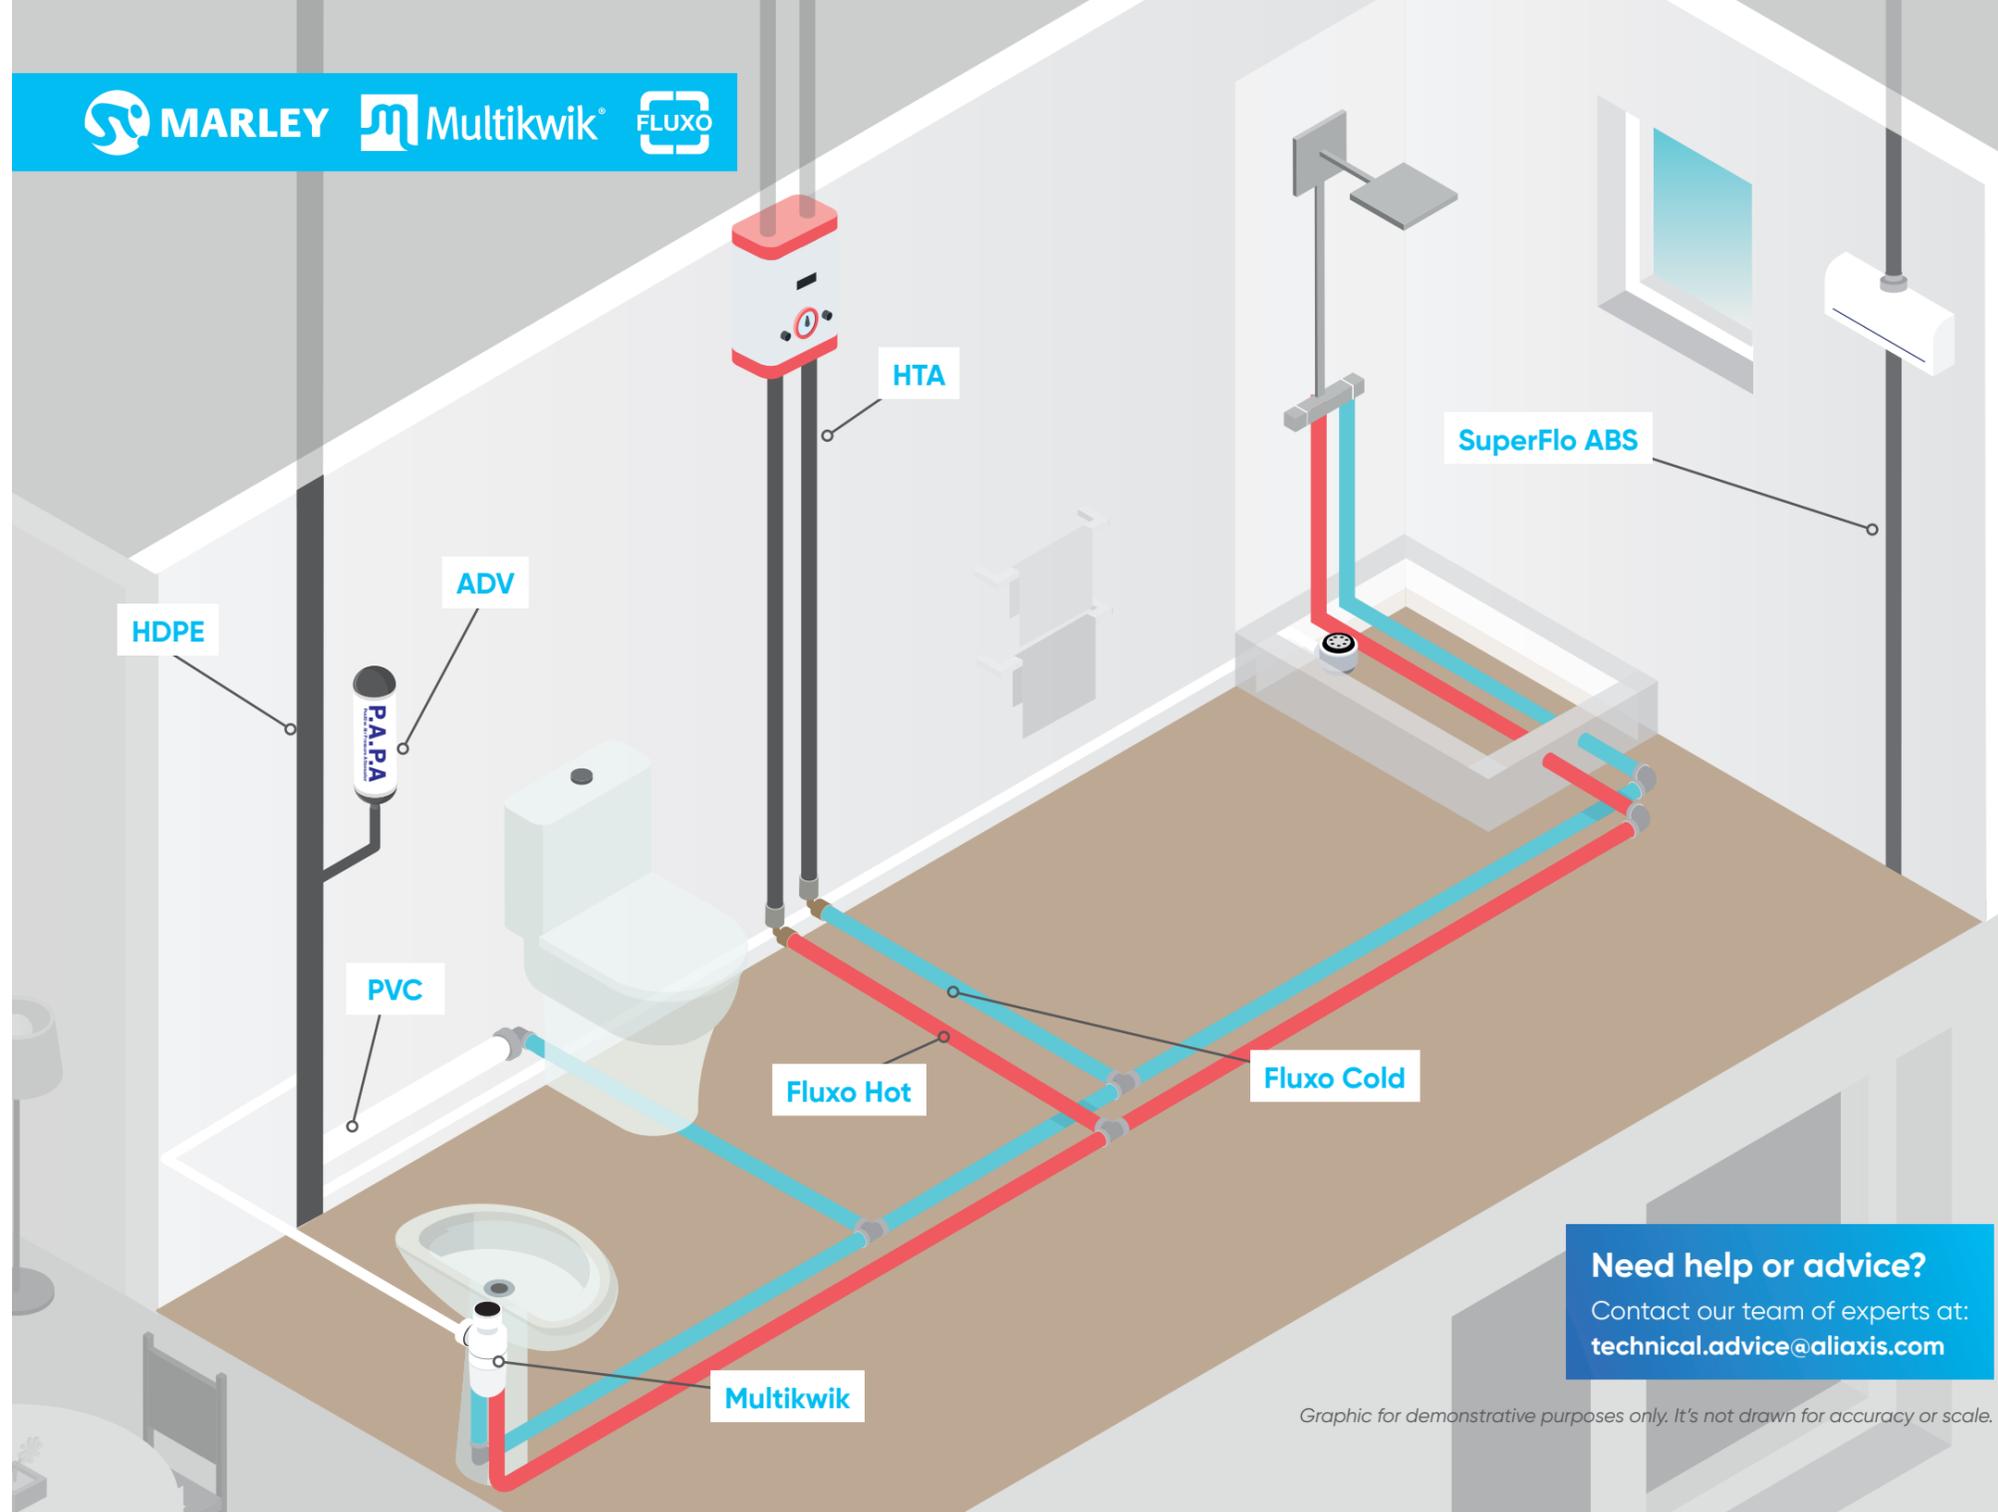

Comprehensive ABS system including pipe, fittings and valves, used for chilled water services and a variety of environmental control systems.

- Wide operating temperature -40°C to +60oC
- Lightweight and easy to install

Active drainage ventilation

PAPA® and Air Admittance Valves controls the movement of air within a drainage system and provides an alternative to traditional secondary venting, saving on material costs and installation times.

- Provides protection against positive and negative pressures in high rise drainage systems
- Maintains the function of traps and toilet water movement, protecting home from foul odour and harmful bacteria

Marley HDPE - Soil and Waste

HDPE is a fully weldable, high-density, polyethylene pipe system. Extremely tough and durable, HDPE provides quick hygienic removal of wastewater.

- High-impact, abrasion and temperature resistant along with some chemical resistant properties.
- Fully compatible with our PVC waste and sanitary ranges

Marley dBlue - Acoustic Drainage

Our dBlue acoustic system is a triple-layer drainage solution, designed to drastically reduce the sound of flowing wastewater.

- Minimises fluid movement noises to provide comfort and peaceful spaces
- Quick and easy to install

Marley uPVC - Soil and Waste

PVC is our reliable and versatile drainage system that can be designed to suit your specific project, for both commercial and residential applications.

- Wide range of material and colour sizes
- Push-fit or solvent weld jointing options

Multikwik Sanitary

Multikwik is a comprehensive wide range of robust sanitary and waste traps, connectors and drainage solutions, designed to protect your system and deliver on your aesthetic needs.

- Ideal for both hidden plumbing and exposed pipework
- Ensures watertight joints past the point of installation
